CHILDREN'S TOYS reflect the age in which they live. Not too many years ago youngsters built model airplanes to emulate the daring men that flew in the skies overhead. Today we are in the age of missiles, and man is reaching into space with fiery projectiles. To keep pace, toys must reach the sky, at least, and be propelled by rocket fuel. This can mean trouble if youngsters make homemade rockets and try to power them with concoctions of gunpowder and other explosives. Even adults do not have the scientific know-how to safely handle such dangerous toys. But now there is an answer. A safe one.

The toy is called a Rock-A-Chute, and it's a scale-model of the type of missile used to explore space. It is propelled by a rocket motor of solid fuel and is so designed that at the top of its trajectory it releases its nose cone and ejects a parachute that drops the unit safely back to earth. The nose cone is soft rubber, for safety in handling, and the solid-fuel engine cannot be fired except by a 6- or 12-volt battery.

To be absolutely sure of this space-age toy, a kit was obtained, a 13-year-old boy assembled it and the completed rocket was fired under adult supervision. An automobile battery was used for the firing. The car was driven onto a large, open field leads were run from the battery and the rocket was fired. There was no flame, no problem, no worrisome incidents. Dad had as much fun as the youngster.

The Arcon Rock-A-Chute kit consists of only a few parts, and no trouble was encountered by the youngster in assembling the model rocket. All stress points at the fins and along the launching lug were given double coats of fast-drying cement. The launching stand, consisting of two strips of wood and a telescoping wire, went together easily. In the original
“ARCON”... Only $4.98 and other exciting SPACE AGE accessories... Available now from your local hobby dealer or direct from

A GOLDEN OPPORTUNITY
TO GET AHEAD IN AN INFLATION PROOF MILLION DOLLAR IMPORT MAIL ORDER BUSINESS
An Urgent Message To Anyone Who Wants To Trade Debts For Dollars!

DEAR FRIEND,
If you’re like most Americans today, you’re a victim of the economic climate that often enters into the lives of many people. A steady devalue of currency, rising prices of necessities, and high taxes can be overwhelming. However, there’s a way to turn these challenges into opportunities for success.

We present to you an incredible opportunity to get ahead in an inflation-proof million dollar import mail order business. This is your chance to create a stable income stream and improve your financial situation.

INFLATION HELPS BUSINESS GROW!
The world is looking to import. The Inflation Proof Million Dollar Mail Order Business. This is your opportunity to thrive in an inflationary environment. Today’s inflation has not phased the million dollar mail order business. Now, more than ever, the time is ripe to explore new avenues of income. This is your chance to earn an income that surpasses the cost of living.

CASH IN ON FOREIGN MADE PRODUCTS (Imports)
Everyone knows that foreign markets are rich with opportunities. When you buy abroad, you buy quality made products at substantially lower prices. Your customers can save money by purchasing these products. You can make a fortune by importing and reselling these goods.

NO INVESTMENT IN MERCHANDISE
This business is almost risk-free. You don’t need to invest in inventory. You can start with as little as $100 and see returns on your investment. Your customers can order what they need, and you can collect the invoices. This reduces your financial risk and allows you to scale your business as you see fit.

EXCLUSIVE FRANCHISE IF YOU CAN QUALIFY
Once you start making money in this new, exciting way, you’ll want to quickly earn more. The golden opportunity is yours. This is your chance to become an exclusive franchise holder. When you qualify, you will receive ongoing support, marketing strategies, and exclusive rights to sell products in your area.

ACT NOW BEFORE IT’S TOO LATE!
Only a limited number of exclusive franchises are available. I’ll tell you that you get FREE DETAILS about this INCREDIBLE IMPORT MAIL ORDER BUSINESS. Send your Name, Address, and Phone Number to:

NELS IRWIN, Dept. 8131
Mail Order Division
15201 S. Broadway, Los Angeles 61, Calif.

SUDDENLY the missile hurtles upward, supported on a streaming column of smoke. Distinctly seen in this photograph is the short jet of power coming directly from the rocket engine in the climbing missile.

kit a plastic collar is cemented inside the rocket body, against which the solid-fuel engine is fitted. On the first firing, the motor ejected instead of the nose cone being fired free. Checking with the manufacturer we slipped a rubber band around the motor and it then stayed in the rocket body and fired off the nose cone so the parachute came free and lowered the unit to the earth. Rubber bands now are used instead of the plastic collar. A piece of lamp cord 15 ft. long, fitted with alligator clips, is required. The clips fit on the igniter wires that are taped to the end of the motor. The opposite ends of the wires are wrapped on nails. When everyone is clear of the rocket, a 5-sec. countdown is made, the nails are touched to the battery terminals and the rocket puffs smoke for a fraction of a second, then leaps skyward. At the top of the flight the nose cone pops loose, the parachute ejects and the assembly floats to earth as shown in the photograph above. If you can remember the thrill of the first flight of a model airplane you built, you will know what it is like to see the tiny, slender rocket rushing up on a column of smoke. Extra-power motors are available for the rocket, for high altitude flights. Two-stage boosters also are made, as are scale-model launching towers. If you want to introduce your son to the space age the safe way, and have fun yourself, this model rocket is the answer. △△
